

Dexian Successfully Creates Release Management Assessment

PROBLEM:

Company growth necessitated stronger development and QA testing environments. The client needed improved processes, tools, and resources to manage testing tasks efficiently.

SOLUTION:

A 3-person team built a comprehensive test environment with features including concurrent testing, data management, automated provisioning, consolidated workflows, and automated test execution, enhancing production support.

OUTCOME:

Standardized operations, a clear physical architecture, documented build and release processes, and automation recommendations pave the way for a faster delivery model.

CASE STUDY:

Retail

CLIENT INFORMATION:

An American retail and outdoor recreation services corporation.
