

Dexian Delivers Compliant Time & Payroll Automation in a 13-Week ADP WFS Rollout.

PROBLEM:

Legacy time-tracking processes relied on entering time into Excel spreadsheets. This inefficient, manual process was error-prone, leading to inaccurate time data, payroll issues, and compliance challenges. Additionally, the customer manually transferred data between systems and had very limited reporting capabilities.

SOLUTION:

Dexian successfully delivered a low-cost, scaled-down time capture solution within a streamlined 13-week implementation cycle, enabling real-time and compliant time entry through physical time clocks, automating end-to-end data flow via seamless HR and Payroll system integrations, and establishing standardized reporting to improve operational visibility, accuracy, and audit readiness.

OUTCOME:

Automated time data collection and HR/payroll system integration cost the customer less than \$60K over a 13-week period.
