

Dexian Enables Seamless SharePoint Migration with Zero Data Loss & Rapid User Adoption

PROBLEM:

Legacy cloud storage limited scalability and created adoption risk during migration. Transferring 707 folders to SharePoint required more than data movement: it demanded user readiness. Without structured enablement, the transition risked workflow disruption, confusion, and productivity loss.

SOLUTION:

Dexian executed a dual-track approach: technical migration and user enablement. Migration was delivered with zero data loss and full auditability, including a detailed audit-ready report. Discovery-led sessions informed role-based training built around real workflows. 1:1 hyper care and proactive communication ensured user confidence and smooth transition.

OUTCOME:

Migration completed on schedule with zero data loss, while user adoption accelerated with reduced support volume and immediate operational readiness at go-live.

CASE STUDY:
Dexian SharePoint Migration
& Adoption Excellence

CLIENT INFORMATION:
Medical Research Company

DIVISION:
Digital Workplace & Collaboration

SERVICE CAPABILITIES:

- SharePoint Migration
- Cloud Data Transformation
- User Enablement & Training
- Change Management & Hypercare

KEY HIGHLIGHTS :

- 707 folders migrated with zero data loss
- Accelerated user adoption post go-live
- Role-based training and hypercare support

CONTRACT:
Platform Migration & Enablement
